

## Listing of Claims

In the Claims. This Listing of Claims replaces all prior versions and listings of Claims in the application.

1           1.       (Currently Amended)       A document capture device for an  
2 imaging device comprising a document capture arm connected to the imaging  
3 device and positionable on a platen for securing a document in a selected  
4 position on the platen and a capture arm actuator attached at and extending from  
5 a proximate end of the document capture arm into an opening path of a rear edge  
6 of the cover for coordinated manipulation of the document capture arm with the  
7 cover.

1           2.       (Original)       The document capture device of Claim 1 wherein the  
2 document capture arm further comprises a document capture arm removably  
3 connectable to the imaging device, the document capture arm positionable on the  
4 platen for securing a document in a selected position on the platen.

1           3.       (Currently Amended)       A document capture device for an  
2 imaging device including a platen and a platen cover, the document capture  
3 device comprising a document capture arm disposed between the platen and the  
4 platen cover, the document capture arm positionable on the platen for securing a  
5 document in a selected position on the platen and a capture arm actuator  
6 attached at and extending from a proximate end of the document capture arm  
7 into an opening path of a rear edge of the cover for coordinated manipulation of  
8 the document capture arm with the cover.

1           4.       (Cancelled)       The document capture device of Claim 3 wherein the  
2 document capture arm further comprises a document capture arm including a  
3 capture arm actuator attached at and extending from a proximate end of the  
4 document capture arm into an opening path of a rear edge of the cover for  
5 coordinated manipulation of the document capture arm with the cover.

1           5.       (Original)    The document capture device of Claim 3 wherein the  
2 document capture arm further comprises a frictionally positionable document  
3 capture arm.

1           6.       (Original)    The document capture device of Claim 3 wherein the  
2 document capture arm further comprises one or more indexing marks.

1           7.       (Original)    The document capture device of Claim 3 wherein the  
2 document capture arm further comprises one or more air holes.

1           8.       (Original)    The document capture device of Claim 3 wherein the  
2 document capture arm further comprises a document capture arm removably  
3 disposable between the platen and the platen cover, the document capture arm  
4 positionable on the platen for securing a document in a selected position on the  
5 platen.

1           9.       (Original)    The document capture device of Claim 3 wherein the  
2 document capture arm further comprises a transparent material.

1           10.      (Original)    The document capture device of Claim 3 wherein the  
2 document capture arm further comprises a relatively flexible material.

1           11.      (Currently Amended)    An imaging device comprising:  
2 an imaging device housing;  
3 a transparent platen forming a surface of the imaging device housing;  
4 a platen cover connected to the imaging device housing;  
5 a document capture arm connected to the imaging device, the document  
6 capture arm positionable on the platen for securing a document in a selected  
7 position on the platen; and  
8 a capture arm actuator attached at and extending from a proximate end of  
9 the document capture arm into an opening path of a rear edge of the cover for  
10 coordinated manipulation of the document capture arm with the cover.

1           12.     (Cancelled)   The device of Claim 11 wherein the document capture  
2     arm further comprises a document capture arm including a capture arm actuator  
3     attached at and extending from a proximate end of the document capture arm  
4     into an opening path of a rear edge of the cover for coordinated manipulation of  
5     the document capture arm with the cover.

1           13.     (Original)    The device of Claim 11 wherein the document capture  
2     arm further comprises a frictionally positionable document capture arm.

1           14.     (Currently Amended)    The device of Claim ~~[[9]]~~ 11 wherein the  
2     document capture arm further comprises one or more indexing marks.

1           15.     (Currently Amended)    The device of Claim ~~[[9]]~~ 11 wherein the  
2     document capture arm further comprises one or more air holes.

1           16.     (Currently Amended)    The device of Claim ~~[[9]]~~ 11 wherein the  
2     document capture arm further comprises a removable document capture arm.

1           17.     (Currently Amended)    The device of Claim ~~[[9]]~~ 11 wherein the  
2     document capture arm further comprises a transparent material.

1           18.     (Currently Amended)    The device of Claim ~~[[9]]~~ 11 wherein the  
2     document capture arm further comprises a relatively flexible material.

1           19.     (Currently Amended)    An imaging device comprising:  
2     an imaging device housing;  
3     a transparent platen forming a surface of the imaging device housing;  
4     a platen cover connected to the imaging device housing;  
5     a receiver formed on the imaging device housing; and  
6     a document capture arm attached to the receiver, the document capture  
7     arm positionable over the transparent platen; and  
8     a capture arm actuator attached at and extending from a proximate end of  
9     the document capture arm into an opening path of a rear edge of the cover for  
10    coordinated manipulation of the document capture arm with the cover.

1           20.    (Original)    The document capture device of Claim 19 wherein  
2    further comprising a removable document capture arm.
